Invented for life

Flexible energy
savings

Gas-fired floor-standing condensing boiler

Condens 7000 F

High quality for a range of application areas

The flexible Condens 7000 F gas-fired floor-standing condensing boiler covers a broad performance spectrum of 75 to 600 kW – efficiently and with low emissions. It therefore offers your customers a technically and economically sound solution for a wide range of tasks based on Bosch's guaranteed high quality.

Plan effectively

No matter how your heating system is designed, the Condens 7000 F fits in easily. Its particularly robust hydraulics and high flow temperatures of up to 95 °C mean that there is no need for additional components such as a low loss header or heat exchanger. With this boiler, planning is incredibly simple.

Combine reliability and flexibility

The boiler is available in six output sizes from 75 to 300 kW. Cascading allows you to achieve outputs of up to 600 kW. The Condens 7000 F therefore reliably covers the performance requirements for small to large projects and is ideal for buildings used commercially and in the housing industry.

Profit from efficiency

The modulating gas premix burner automatically adapts to the current heat demand. The boiler therefore also works efficiently even when the unit does not need to operate at full power. For your customers, this translates into a high level of efficiency and consistent energy savings at any time of the day or year.

Flexible installation

A compact design, low weight and the special design with an x-shaped frame ensure that the unit is easy to

transport and can be installed safely. Depending on how much space is available and where, you can set up the flue gas connection behind or on top of the boiler.

Expert service

The side sections are removable. This means that all components are directly accessible. As a result, all maintenance work can be carried out quickly and easily.

Intuitive control

Bosch provides your customers with the latest in control technology for the Condens 7000 F. With Control 8000 or EMS plus, in combination with CW 400 or CW 800, your customers can control the boiler in the way that works best for them. This allows your customers' specific requirements to be met, down to the smallest detail. Operation is as simple as can be – specific training is not required.

Simple networking

With MEC Remote or HomeCom from Bosch, your customers can easily network the boiler and remotely control it with precision using a smartphone or tablet – operation is intuitive. The standard Internet interface makes this possible.
