

TECHNICAL GUIDE

**SINGLE PACKAGE
AIR CONDITIONER/GAS HEAT
14 SEER – R-410A – 1 PHASE
2 TO 5 NOMINAL TONS - 208/230 V
50 TO 125 MBH HEAT INPUT
MODELS: PCG4*24 TO 60**

Due to continuous product improvement, specifications are subject to change without notice.

Additional rating information can be found at
www.ahridirectory.org

WARRANTY SUMMARY*

Extended 10-Years limited parts and compressor warranty
Lifetime gas heat exchanger warranty with registration.

* Extended warranty requires online registration within 90 days of purchase for replacement or closing for new home purchase. See limited warranty certificate in User's Information Manual for details.

DESCRIPTION

These packaged cooling/heating air conditioners are designed for outdoor installation. Only utility and duct connections are required at the point of installation.

FEATURES

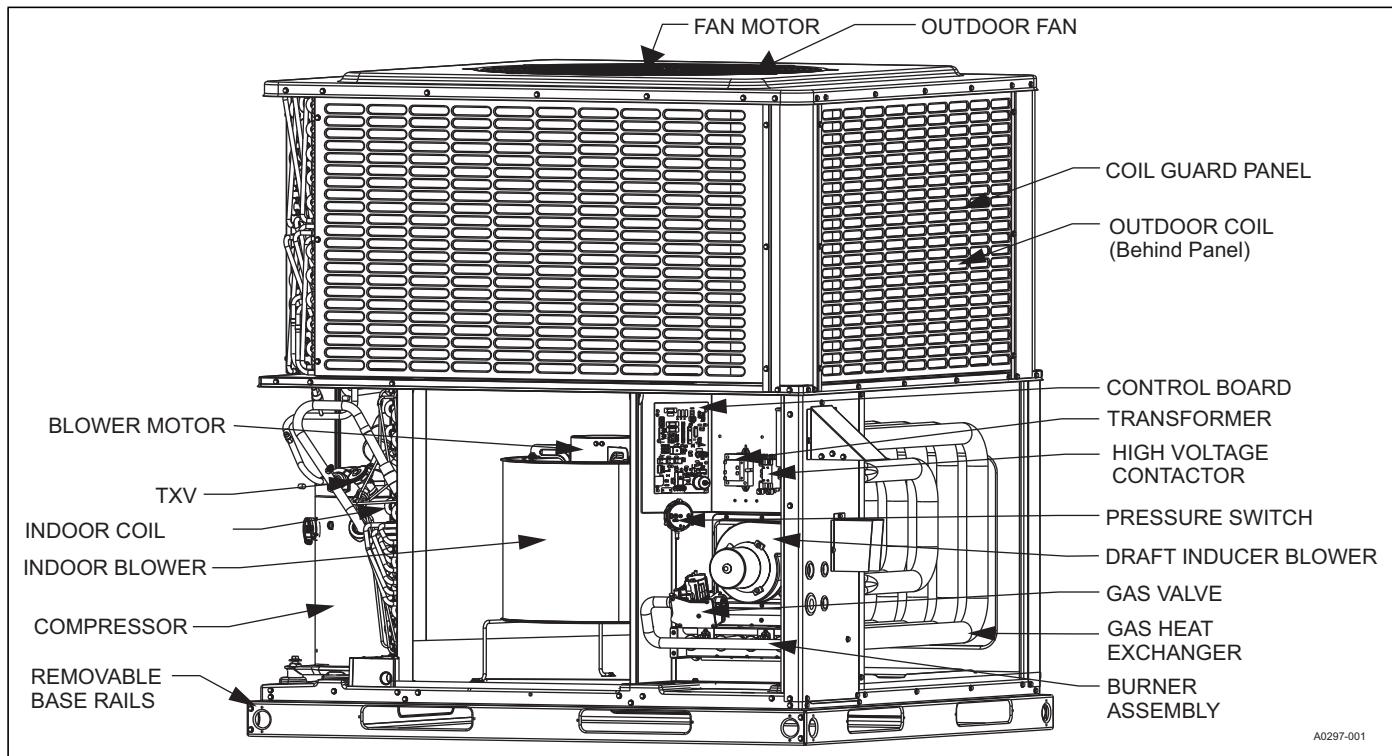

- Operating Efficiency** - All PCG4 model gas units provide a minimum AFUE of 81.0% in heating and 14.0 SEER, 11.0 EER rating for cooling operation. All models meet California Low-Nox requirements of 40 ng/J emission level for Air Quality Management Districts.
- On-Site Flexibility** - All model sizes use a compact design cabinet in one of two footprints. This provides installer flexibility for placing the proper capacity unit on curbs or pads with the smallest footprint after the internal load has been determined. Field convertible duct connections from side shot to down shot allow the installer to have greater flexibility with less inventory.
- Lower Installation Cost** - Installation time and costs are reduced by easy power and control wiring connections. The small base dimension means less space is required on the ground or roof. All units are completely wired, charged with R-410A, and tested before shipment. Test stations using a state-of-the-art computerized process system are used to ensure product quality. Refrigerant charge and component part numbers are verified using computers during assembly. Vital run test statistics such as system pressure, motor currents, air velocity and temperature, unit vibration, and gas system safeties are monitored and recorded by the system to ensure unit performance. Equal size side supply and return duct connections allow easy connection of ducts to match low crawl spaces without transition pieces.
- Utility Connections Made Easy** - Gas and electric utility access provided through the bottom or the side of the unit. Utility connections can be made quickly and with a minimum amount of field labor. A field supplied and field installed electrical disconnect switch must be installed.
- Convertible Airflow Design** - The bottom duct openings are covered when they leave the factory, ready to be used for a side supply/side return application. If a bottom supply/bottom return application is required, remove the two panels from the bottom of the unit and place them in the side supply/side return duct openings. No panel cutting is required and no accessory panel is necessary. Convertible airflow design allows maximum field flexibility and minimum inventory.
- Condensate Pan** - A corrosion-resistant, long-lasting, water-tight pan is positioned below the indoor coil to collect and drain all condensate, preventing build-up of stagnant condensate. The condensate pan conforms to ASHRAE 62-89 standards (Ventilation for Acceptable Indoor Air Quality).
- Condensate Drain** - The 3/4 in. NPT female connection is rigidly mounted to ensure proper fit and leak tight seal.
- Durable Finish** - The cabinet is made of G90 galvanized steel with a powder paint coating for appearance and protection. The pre-treated galvanized steel provides a better paint-to-steel bond, which resists corrosion and rust creep. Powder paint finish ensures less fading when exposed to sunlight, and provides superior corrosion resistance (1000 hour salt spray tested).

Continued on next page.

- **Full Perimeter Base Rails** - The easily removable base rails provide a solid foundation for the entire unit and protect the unit during shipment. The rails provide forklift access from all sides, and rigging holes are also provided so an overhead crane can be used to place the units on a roof. On applications where the unit is placed on a pad, the base keeps the unit off the pad to deter corrosion. On applications where height is limited, the base rails can be removed by removing two screws in each corner.
- **More Attractive Appearance** - A single-piece top cover containing a top-discharge outdoor fan arrangement requires less square footage on installation and provides a wider variety of installations. The one-piece design adds greater water integrity. Rounded corners with water drip edges add to the attractive appearance.
- **Top Discharge** - The top-discharge outdoor fan does not disrupt neighboring areas or dry out vegetation surrounding the unit. The warm air from the top mounted fan is blown up and away from the structure and any landscaping. This allows compact location on multiunit applications.
- **Outdoor Coil Grille** - All models utilize a stamped slotted design that provides superior impact protection against small objects during transit and after installation.
- **Low Operating Sound Level** - The upward air flow carries the normal operating noise up and away from the living area. The rigid top panel effectively isolates noise. Isolator mounted compressor and the rippled fins of the outdoor coil muffle the normal fan motor and compressor operating sounds. The unique formed base pan also aids in sound attenuation with its structural design. This design strategically places embossments in the pan for optimum strength and rigidity.
- **Fan System** - All models operate over a wide range of design conditions with a standard ECM indoor fan motor. These units easily match all types of applications and provide greater on-site flexibility to match comfort requirements. The cooling speed is factory set and can be field-adjusted to a second speed. The heating speed is factory set to maintain midpoint rise at the units' heating input, but can be field adjusted. This allows maximum comfort conditions.
- **Simple Control Circuit** - A low voltage gas heat printed circuit board contains a status/diagnostic indicator light. Field thermostat wiring connects to color coded leads using twist on wire connections. Cooling controls use contactor and relays for simple application and troubleshooting. Mate-n-lock plug connectors are used. The electrical control box is not located in the compressor compartment. The controls are mounted to allow the separate access panel to be removed for troubleshooting and maintenance without affecting the normal system operating pressures. All wiring internal to the unit is color/number coded.
- **Protected Compressor** - The compressor is internally protected against high pressure and temperature. This is done by the simultaneous operation of a high pressure relief valve and a temperature sensor, which protects the compressor if undesirable operating conditions occur.
- **Pressure Switches** - A high pressure switch is standard in all units. It is an automatic reset switch. When discharge pressure reaches 650 psi, the compressor de-energizes until pressure reaches 450 psi.
- **Exclusive Coil Design** - The grooved copper tubes and enhanced aluminum fin construction of the indoor coils improve heat transfer for maximum efficiency and durability. Indoor coils have tin-coated copper tubing with aluminum fins for effective heat transfer. PCG4A24, PCG4B48, and PCG4B60 models have tube and fin outdoor coils that provide efficient heat transfer. PCG4A30, PCG4A36, and PCG4A42 models have non-galvanic microchannel outdoor coils that enhance efficiencies and reduce unit size and charge levels.
- **Heat Exchangers** - Gas heat exchangers use corrosion-resistant, stainless-steel tubular construction to provide long-life, trouble-free operation. Gas heat exchangers are offered with lifetime warranties as standard with registration.
- **Post Purge Induced Draft Combustion** - Exhausts combustion products from the heat exchanger upon completion of the heating cycle to prolong the heat exchanger life.
- **Spark To Burner Ignition** - No pilot assembly required, which provides more consistent ignition in gas heating mode. This ignition is highly reliable and durable and eliminates nuisance lockouts.
- **Multi Port In-Shot Burners** - No field adjustment is required to mix the air and gas for natural gas or propane use. These burners are constructed of high-grade corrosion-resistant, aluminized steel.
- **Low Maintenance** - Long life, permanently lubricated outdoor and evaporator fan motor bearings need no annual maintenance, adding greater reliability to the unit. Slide-out blower assembly can be easily removed for cleaning.
- **Easy Service Access** - Individual access panels covering the electrical and gas controls, compressor, and blower make servicing easy. Removing these panels allows easy removal of components such as the blower assembly for maintenance and troubleshooting.
- **Replacement Parts** - The installer requires no special training to replace any of the components of these units. The number of new components has been reduced to minimize the inventory of unique parts.
- **Transition Curb Kits (\$1-1TC01*)** - Adapter kits to allow field use of pre-existing installed roof curbs to match PCG4 footprint to Affinity roof curbs, Carrier, Trane, or Goodman curb footprints. Curb adapters are optional for current generation Carrier replacements, but are recommended for previous generation applications. Refer to the PCG4 price pages for more details.

COMPONENT LOCATION

Note: PCG4A24, PCG4B48, and PCG4B60 models have tube and fin outdoor coils as shown in the figure above. PCG4A30, PCG4A36, and PCG4A42 models have microchannel outdoor coils.

UNIT LIMITATIONS

| Model | Unit Voltage | Unit Limitations | | |
|---------|--------------|------------------|---------|------------------------|
| | | Applied Voltage | | Outdoor DB Temperature |
| | | Minimum | Maximum | Maximum (°F) |
| PCG4A24 | 208/230-1-60 | 187 | 252 | 125 |
| PCG4A30 | 208/230-1-60 | 187 | 252 | 125 |
| PCG4A36 | 208/230-1-60 | 187 | 252 | 125 |
| PCG4A42 | 208/230-1-60 | 187 | 252 | 125 |
| PCG4B48 | 208/230-1-60 | 187 | 252 | 125 |
| PCG4B60 | 208/230-1-60 | 187 | 252 | 125 |

APPLICATIONS AND ACCESSORIES

| Application Limitations | | | | |
|---------------------------|--------------------------------------|---------|-------------------------------------|---------|
| Packaged Equipment Series | Air Temperature at Outdoor Coil (°F) | | Air Temperature at Indoor Coil (°F) | |
| | Minimum | Maximum | Minimum | Maximum |
| | DB Cool | DB Cool | WB Cool | WB Cool |
| 14 SEER AC | 55 | 125 | 57 | 72 |

- **Anchor Bracket Kit (S1-1HK0601)** - This kit firmly anchors PCG, PCE, PHE, and PHG packaged units to a pad or support structure. When properly installed, the kit is approved for ground-mounted or roof-mounted applications, wind load certified, and listed with the State of Florida. See <https://floridabuilding.org> for this listing.
- **Propane Conversion Kit (S1-1NP0703, S1-1NP0704)** - Kit includes burner orifices, gas valve conversion, and installation instructions necessary to field convert unit from natural gas to propane.
- **Economizer for Downflow Applications (S1-2EE04710024, S1-2EE04710124)** - Modulating integrated economizer provides simultaneous operation between the mechanical cooling and economizer operation. Independent blade design ensures proper control and less than 1% leak rate. Includes hood and mesh bird screen filter integrated into the hood, dry bulb sensor, and barometric relief damper. Separate field accessories of single enthalpy and dual enthalpy are also available.
- **Economizer for Horizontal Applications (S1-2EE04710224, S1-2EE04710324)** - Modulating integrated economizer provides simultaneous operation between the mechanical cooling and economizer operation. Independent blade design ensures proper control and less than 1% leak rate. Includes hood and mesh bird screen filter integrated into the hood and dry bulb sensor. Separate field accessories of single enthalpy and dual enthalpy are also available.
- **Barometric Relief Hood (S1-1RD0501)** - Used in conjunction with a horizontal economizer, the Barometric Relief Hood helps to equalize the building pressure that is caused by the fresh air that is introduced through the economizer fresh air hood.
- **Single/Dual Enthalpy Sensor (S1-HE-69630NS-2D)** - Sensor replaces supply air temperature dry bulb sensor standard in economizer kit. Provides improved economizer operation by sensing the dry bulb temperature of indoor supply air plus the enthalpy content of the outdoor air.
- **Duct/Unit Mount CO2 Kit (S1-2AQ04700924)** - Sensor kit detects CO2 levels automatically and overrides the economizer when CO2 levels rise above the preset limits.
- **Wall Mount CO2 Kit (S1-2AQ04701024)** - Sensor kit detects CO2 levels automatically and overrides the economizer when CO2 levels rise above the preset limits.
- **Supply Air Temperature Sensor Kit (S1-TE-63616E-2D)** - Outdoor supply air temperature sensor kit used with economizers.
- **Filter/Frame Kit (S1-1FF0602, S1-1FF0601)** - Kit contains the necessary hardware to field install return air filters into the base unit. The filter rack is suitable for 1 in. or 2 in. filters.
- **Filter (S1-02647812000)** - Washable 1 in. filter. Two filters are required for A base units. Three filters are required for B base units.

• Motorized Fresh Air Damper

(S1-2MD04705224, S1-2MD04705124) - Designed for duct mounted side supply/return and unit mounted down supply/return applications. Damper capable of providing 0% through 50% of outdoor air (field supplied). Closes on power loss and includes hood and screen assembly.

• Rectangle to Round (Horizontal) Adapter

(S1-1AK0110, S1-1AK0111) - Kit includes one supply and one return air rectangle to round duct adapter. Adapters are preformed and designed to fit over current horizontal duct openings on the base unit. Transition is from rectangle to 12 in. round for the 1AK0110 kit and from rectangle to 14 in. round for the 1AK0111 kit.

• Rectangle to Round (Downflow) Adapter

(S1-1AK0108, S1-1AK0109) - Kit includes one supply and one return air rectangle to round duct adapter. Adapters are preformed and designed to fit into current downflow duct openings on the roof curb. Transition is from rectangle to 16 in. round for the 1AK0108 kit and from rectangle to 18 in. round for the 1AK0109 kit.

• Roof Curbs (S1-1RC0503, S1-1RC0501)

NRCA approved curbs provide proper fit to base unit for rooftop installations.

Curbs are designed to be assembled through hinge pins in each corner. Kit also provides seal strip to ensure an air tight seal. These are 8-inch high roof curbs.

• Roof Curbs (S1-1RC0504, S1-1RC0502)

NRCA approved curbs provide proper fit to base unit for rooftop installations.

Curbs are designed to be assembled through hinge pins in each corner. Kit also provides seal strip to ensure an air tight seal. These are 14-inch high roof curbs.

• Transition Curb Kits (S1-1TC01*)

Adapter kits to allow field use of preexisting installed roof curbs to match PCG4 footprint to Affinity roof curbs, Carrier, Trane, or Goodman curb footprints. Curb adapters are optional for current generation Carrier replacements, but are recommended for previous generation applications. Refer to the PCG4 price pages for more details.

• Manual Outdoor Damper (S1-1FA0502, S1-1FA0501)

Provides 0% through 50% outdoor air capability (field adjustable).

Designed for duct mounted side supply/return applications. Includes hood and screen assembly.

• Transformer Kit (S1-2EC06700124)

Kit provides necessary hardware to provide single phase models from factory furnished 40 VA transformer capability to 75 VA transformer capability. Required on installations with economizer or motorized damper.

• Loss of Charge Switch (S1-2LC00024)

Kit provides Loss of Charge switch and wiring to provide safe shutdown of compressor.

• Low Ambient Kit (S1-2LA04701024)

Kit provides necessary hardware to convert unit to operate in cooling cycle down to 0°F. Standard unit operation 45°F.

• Base Rail Hole Cover Kit (S1-1HC0101)

Kit provides necessary hardware to close off openings in base rails to block off openings, that is, prevent animal entrance.

• Thermostat

Compatible thermostat controls are available through accessory sourcing. For optimum performance, these outdoor units are fully compatible with our residential Hx™ Touch Screen Thermostat available through Source 1. For more information, refer to the thermostat section of the Product Equipment Catalog.

• Wall Thermostat

The units are designed to operate with standard, 24 V electronic and electromechanical thermostats.

All units can operate with single stage heat/single stage cool thermostats - with or without the economizer.

* For additional kit numbers, refer to the price pages.

GUIDE SPECIFICATIONS

GENERAL

Units shall be manufactured by Ducted Systems in an ISO 9001 certified facility. Packaged units give you the flexibility and choice you need in today's market. These packaged cooling/heating air conditioners are designed for outdoor installation. Only utility and duct connections are required at the point of installation. The single-stage gas fired heaters have stainless steel tubular heat exchangers and spark to burner ignition. They are available in natural gas with field conversion to propane.

DESCRIPTION

Units shall be factory-assembled, single packaged, Electric Cooling/Gas Heating units, designed for outdoor installation. For SEER ratings, refer to the technical literature. They shall have built in, equal size, field convertible duct connections for supply/return or horizontal supply/return. The units shall be factory wired, piped, charged with R-410A refrigerant, and factory tested before shipment. All unit wiring shall be both numbered and color coded. All models shall be rated in accordance with DOE and AHRI test procedures for both heating and cooling operation. Units shall be CSA listed and classified to ANSI Z21.47/CAN/ CSA 2.3 standards and UL 1995/CAN/CSA No. 236-M90 standards.

UNIT CABINET

Unit cabinet shall be constructed of G-90 galvanized, powder-painted steel, certified at 1000 hours salt spray test per ASTM-B117 standards. The unit top shall be a single piece design, with drip edges and no-seam corners to provide optimum water integrity. Unit shall have a rigidly mounted outdoor coil guard to provide protection from objects and personnel after installation. Indoor blower section shall be insulated with foil-faced or foam insulation, fastened to prevent insulation from entering the air stream. Cabinet panels shall be separate and easily removable for servicing and maintenance. Unit shall be built on a formed, design base pan, with embossments at critical points to add strength and rigidity and to aid in minimizing sound. Full perimeter base rails shall be provided to ensure reliable transit of equipment and facilitate overhead rigging, allowing truck access and proper sealing on roof curb applications. Base rails shall be easily removable when required to lower unit height. Filters shall be field installed, furnished, and accessible through a removable access door, sealed airtight. The unit's vertical discharge and return duct configuration shall be designed to fit between standard 24 in. O.C. beams without modification to building structure, duct work, and base unit. Condensate pan shall be internally sloped and conform to ASHRAE 62-89 self-draining standards, with 3/4 in. NPT female ridged mount connection.

Indoor Blower Assembly - Fan shall be direct drive design. Fan wheel shall be double-inlet type with forward-curved blades, dynamically balanced to operate smoothly throughout the entire range of operation. Airflow design shall be constant air volume. Bearings shall be sealed and permanently lubricated for longer life and no maintenance. Fan assembly shall be a slide-out design for easy removal and cleaning. Indoor blower motors shall be equipped with a standard high efficiency brushless DC motor (constant torque), also known as a standard ECM motor.

Outdoor Fan Assembly - The outdoor fan shall be of the direct-driven propeller type, discharge air vertically, have aluminum blades riveted to corrosion resistant steel spider bracket, and be statically balanced for smooth operation. The outdoor fan motor shall be totally enclosed with permanently lubricated bearings and internally protected against overload conditions.

REFRIGERANT COMPONENTS

Compressors:

- Shall be fully hermetic type, direct drive, internally protected with internal high-pressure relief and over temperature protection. The hermetic motor shall be suction gas cooled and have a voltage range of +/- 10% of the unit nameplate voltage.
- Shall have internal isolation and sound muffling to minimize vibration and noise, and be externally isolated on a dedicated, independent mounting.

Coils:

- Indoor coils shall have aluminum plate fins mechanically bonded to seamless internally enhanced tin-coated copper tubes with all joints brazed.
- Indoor coil shall be of the direct expansion, draw through design.
- Outdoor coils shall have aluminum plate fins mechanically bonded to seamless internally enhanced copper tubes or aluminum microchannels with all joints brazed.
- Outdoor coil shall be draw through design.

Refrigerant Circuit and Refrigerant Safety Components shall include:

- Thermal expansion devices (TXVs) that are factory mounted and provided.
- Filter,strainer to eliminate any foreign matter.

GAS HEATING SECTION

Heat exchanger and exhaust system shall be constructed of corrosion-resistant materials and shall be designed with induced draft combustion with post purge logic and redundant main gas valve. The heat exchanger shall be of the tubular type, constructed of stainless steel for corrosion resistance and allowing minimum mixed air entering temperature of 40°F. Burners shall be of the in-shot type, constructed of aluminized steel. All gas piping shall enter the unit cabinet at a single location through either the side or bottom, without any field modifications. An integrated control board shall provide timed control of indoor fan functioning and burner ignition. Heating section shall be provided with the following minimum protection:

- Primary high-temperature limit switch
- Induced draft pressure switch
- Flame roll out switch(s) (manual reset)
- Flame proving controls

All gas heat models meet the California requirement for emissions of less than 40 ng/J (California requirement on single phase models only).

| Filters | | | | | | | | | | | | |
| Filter size | A | A | A | A | B | B | B | | | | | |
| Quantity - size | Field-supplied external filters must be sized so as not to exceed 300 fpm air velocity through disposable filters. For internal filter use, a filter rack kit is available. Consult the instructions supplied with the kit for replacement filter sizes. Filter sizes: A=20x20, B=20x30. | | | | | | | | | | | |

UNIT CLEARANCES^{1,2}

| Direction | Distance (in.) | Direction | Distance (in.) |
|---------------------|----------------|--------------------------|----------------|
| Top ³ | 36 | Power Entry (Right Side) | 36 |
| Side Opposite Ducts | 36 | Left Side | 24 |
| Duct Panel | 0 | Bottom ⁴ | 1 |

1. A 1 in. clearance must be provided between any combustible material and the supply air duct work.
2. The products of combustion must not be allowed to accumulate within a confined space and recirculate.
3. Units must be installed outdoors. Overhanging structure or shrubs must not obstruct outdoor air discharge outlet.
4. Units can be installed on combustible materials made from wood or class A, B, or C roof covering materials if factory base rails are left in place as shipped.

1. Airflow tested with dry coil conditions, without air filters, at 230 V.
2. Applications above 0.8 in. W.C. external static pressure are not recommended.
3. Brushless DC high efficiency standard ECM blower motor used for all indoor blower assemblies.
4. Minimal variations in airflow performance data result from operating at 208 V. Data above may be used in those cases.
5. Heating applications tested at 0.50 in. W.C. esp, and cooling applications tested at 0.30 in. W.C.esp per standards.

1. The pressure drop through the economizer is greater for 100% outdoor air than for 100% return air. If the resistance of the return air duct is less than 0.25 IWG, the unit delivers less CFM during full economizer operation.

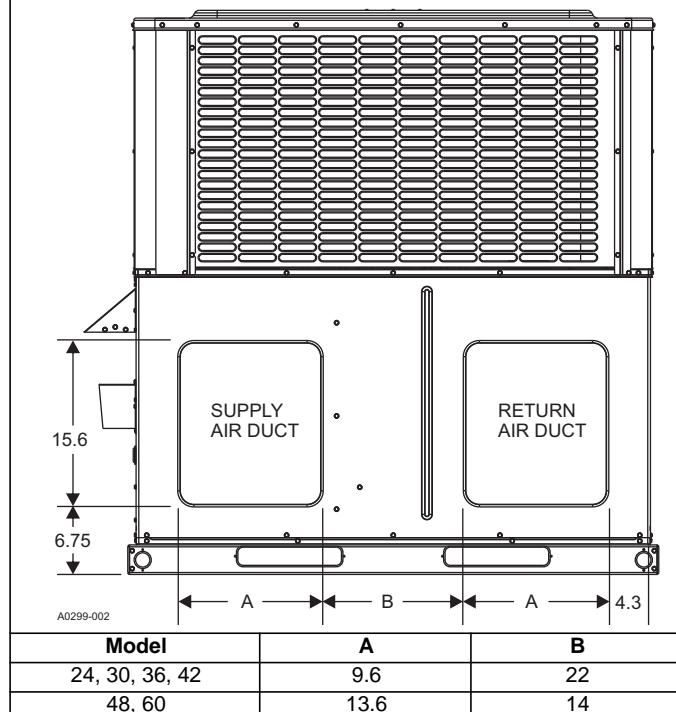

Note: Filter pressure drop based on standard filter media tested at velocities not to exceed 300 ft/min.

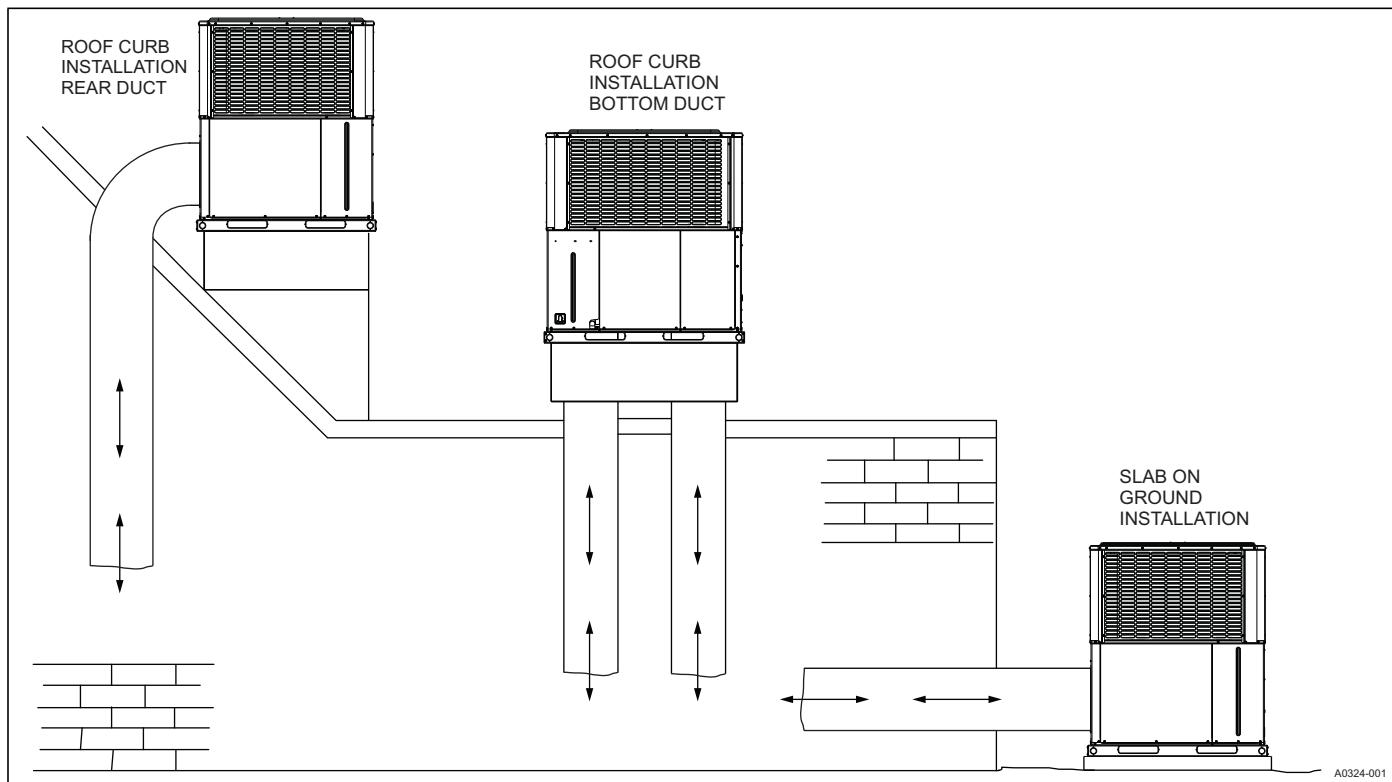

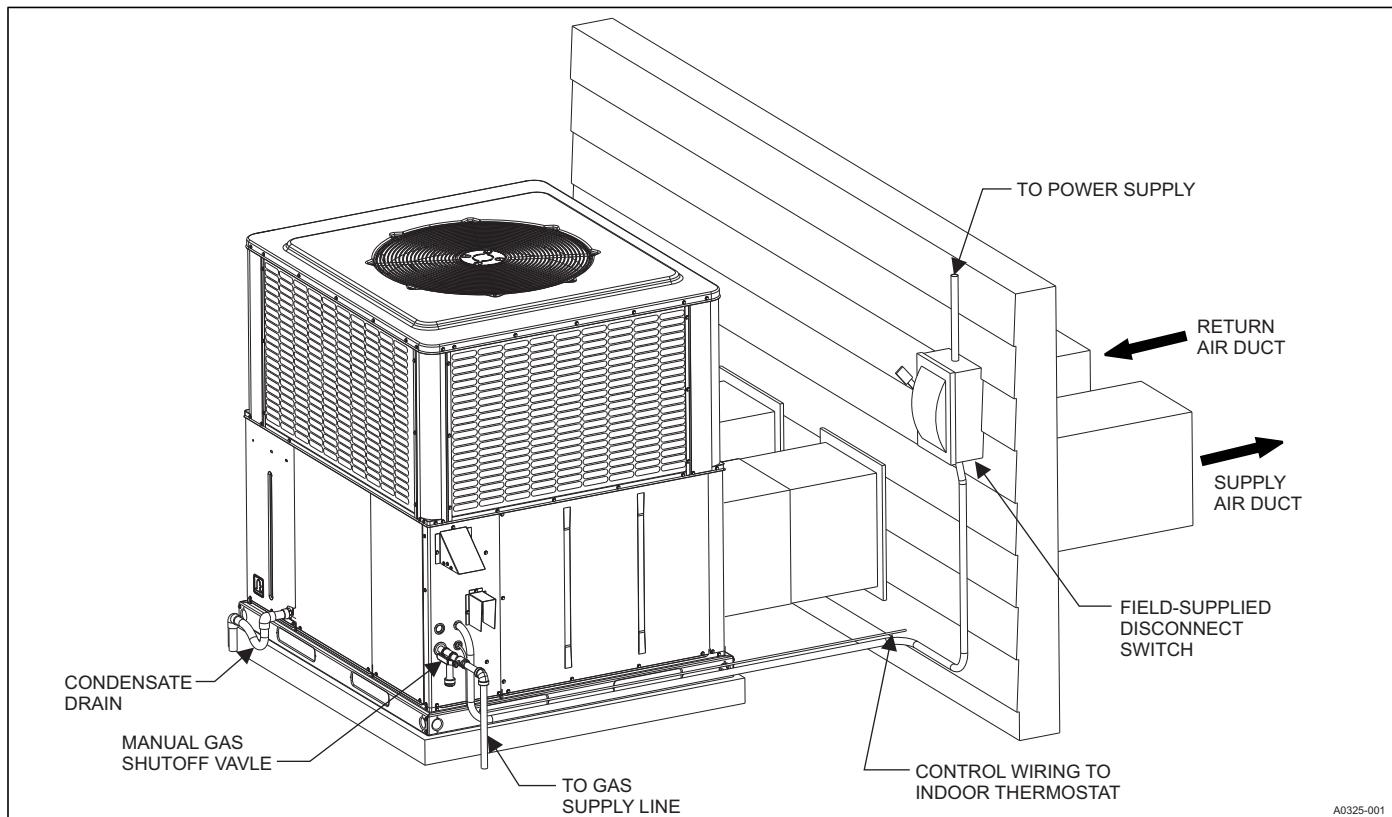

BOTTOM DUCT DIMENSIONS (in.)

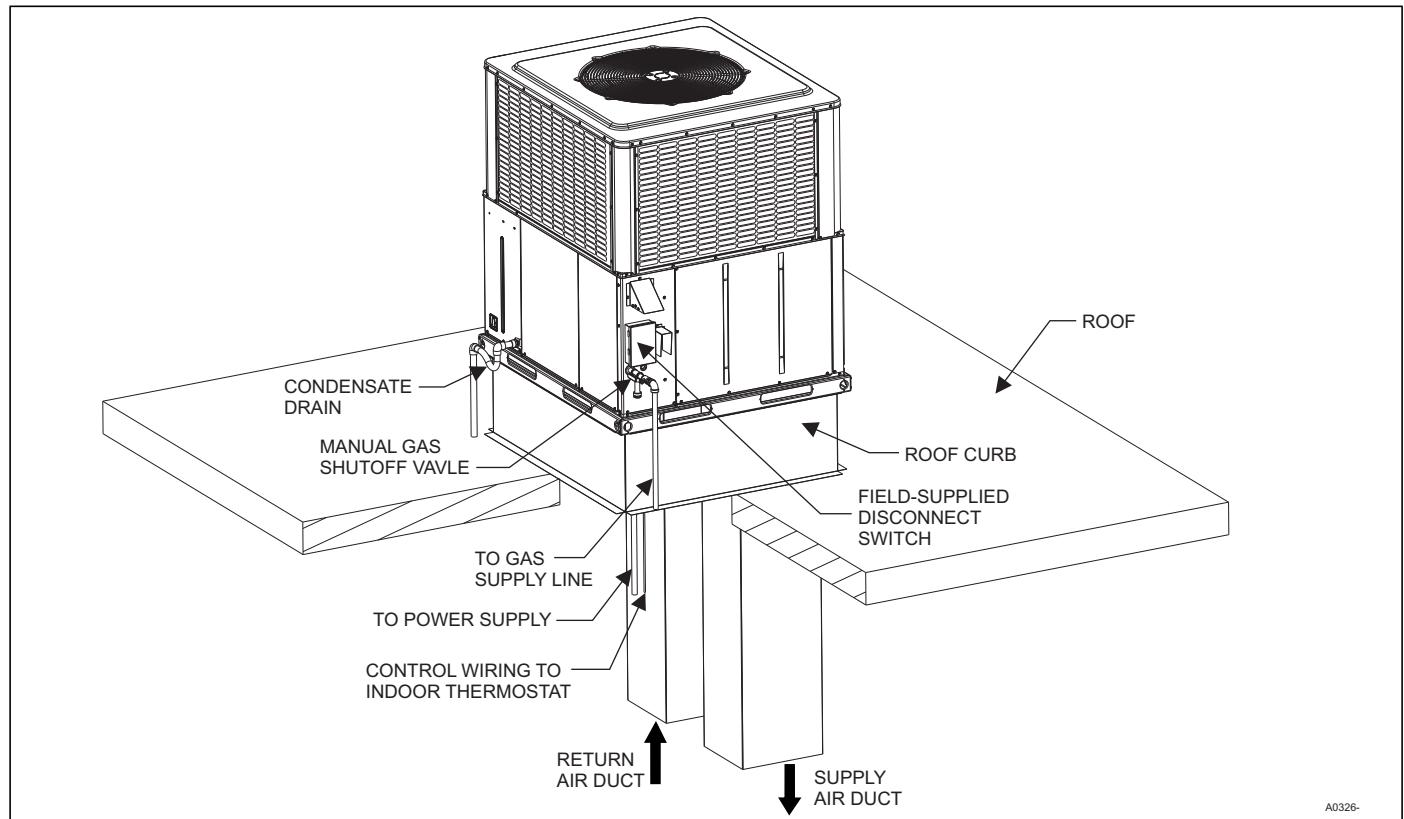

REAR DUCT DIMENSIONS (in.)

NOTE: See Figure titled "Unit Dimensions" for side hole sizes of electrical and gas lines.
